Description

Preconditions:

- 1.The API endpoint is expected to create a playlist for the specified user ({{MyIdUser1}}).
- 2.A valid access token is required for authentication.

Steps to Reproduce:

1. Ensure a valid access token is obtained and available for authentication.
2. Execute the Postman collection using the provided environment and request to create a playlist.
3. Observe the test results

Expected Result: The response time should be below 400 milliseconds.

Actual Result: The response time was 405 milliseconds, which is higher than the expected limit.

The screenshot shows a Postman interface for an HTTP POST request to `https://api.spotify.com/v1/users/{{MyIdUser1}}/playlists`. The 'Tests' tab is active, displaying a test script that checks the response time: `pm.test('Verify if that Response time is less than 400ms', function () { pm.expect(pm.response.responseTime).to.be.below(400); });`. The 'Test Results' tab shows two passed tests and one failed test: 'Verify if that Response time is less than 400ms | AssertionError: expected 405 to be below 400'. The overall status is '201 Created', 'Time: 405 ms', and 'Size: 1.95 KB'.
